

PROFILE

Electronic Engineer and Specialist in Project Management, focused on the design and implementation of technology solutions aimed at optimizing organizational processes and enabling data-driven decision-making. I integrate software and hardware development, analytics, and data engineering to translate business needs and stakeholder requirements into functional, scalable solutions aligned with strategic objectives.

Experienced in developing solutions using Python, SQL, and R, focused on process automation, data integration, and the development of analytical models that enhance traceability, control, and regulatory compliance. I have worked with data from technological, administrative, and operational environments, structuring indicators and information systems that support institutional planning and performance tracking.

My profile combines analytical capability, problem-solving mindset, and strategic vision, enabling me to identify improvement opportunities and transform them into technology-driven solutions that generate operational efficiency, data reliability, and tangible value for public and private organizations undergoing digital transformation.

SKILLS

- Solution Development (Python, SQL)
- Data Analysis
- Dashboards (Power BI)
- Advanced Excel
- Web Development
- LaTeX
- Regulatory Compliance
- Complex Problem Solving

JULIAN DAVID ROBLES FARIAS

ELECTRONIC ENGINEER

PROFESSIONAL LICENSE NO. CN206-184163

INVIMA REGISTRATION NO. RH-202509-04444

EXPERIENCE

Regional Autonomous Corporation of Cundinamarca (CAR)

Legal and Document Management Support – Legal Department

Feb. 2025 – Present

- Design, structure, and manage data engineering architectures and pipelines using data from systems such as SECOP II and SAE, ensuring data integrity, traceability, availability, and quality throughout the lifecycle.
- Develop data ingestion, consolidation, validation, and statistical modeling processes to track PAC 2024–2027 indicators and metrics, enabling reliable analysis of institutional progress and supporting data-driven strategic planning.
- Implement control, governance, and analysis frameworks for contractual and financial data, strengthening transparency, execution monitoring, and decision-making through structured, consistent, and analytics-ready information.

National Learning Service (SENA)

Mar. 2025 – Present

- Manage the operational continuity of systems and technological equipment through the planning and execution of maintenance activities, ensuring service availability and reliability.
- Provide technical support for IT infrastructure and services, handling incidents and user requests to ensure efficient system operation.
- Manage, analyze, and optimize databases, implementing improvements that enhance operational efficiency, information security, and decision-making support.

Outsourced Support Engineer – First Notary Office of Tunja

May. 2023 – Aug. 2025

- Performed preventive and corrective maintenance on technological systems and equipment, ensuring operational continuity.
- Developed, maintained, and updated the institutional website, strengthening digital presence and online service delivery.
- Managed, analyzed, and optimized databases, implementing technical improvements that increased process efficiency and enhanced information security.

Independent Consulting and Auditing for Optometry Centers – Electronic Engineer

Mar. 2025 – Aug. 2025

- Performed preventive and corrective maintenance on optometry equipment, ensuring high quality standards, diagnostic reliability, and extended device lifespan.
- Conducted calibration and technical verification of visual measurement equipment, ensuring compliance with technical standards, traceability, and accurate clinical results.
- Managed technical documentation, installation, and commissioning of equipment in new locations, strengthening operational continuity and service efficiency.

Regional Autonomous Corporation of Cundinamarca (CAR)

Legal and Document Management Support – Legal Department

Sep. 2024 – Dec. 2024

- Reviewed and optimized the structure of environmental data in SAE, SIDCAR, and VITAL systems, ensuring traceability, consistency, integrity, and regulatory compliance throughout the data lifecycle. Implemented data organization, cleansing, and validation processes, enabling structured analysis in regulatory and sanctioning scenarios through dashboards.
- Structured and managed administrative and legal information flows, integrating data related to administrative acts, communications, and notifications to strengthen traceability, control, and analytical use of information required by regulatory entities.
- Contributed to the design of consolidated databases and the implementation of data analysis processes in document backlog reduction initiatives, improving operational efficiency, data availability and quality, and supporting data-driven decision-making.

Outsourced Technical Support – Optometry Equipment

Jan. 2024 – Mar. 2025

- Performed preventive and corrective maintenance on optometry equipment, ensuring proper operation, extended lifespan, and reliability of technical and clinical data.
- Executed calibration and technical verification processes, recording and validating measurement parameters to enable comparative and historical analysis for deviation detection and technical decision support.
- Structured and systematized maintenance, failure, and intervention records, facilitating equipment performance analysis and the generation of standardized technical reports, supported by automation and LaTeX documentation.
- Supported the installation, configuration, and operational standardization of equipment, contributing to error reduction, accurate data capture, and data-driven continuous improvement

Regional Autonomous Corporation of Cundinamarca (CAR)

Document Management Support

Aug. 2022 – Dec. 2023

- Managed document traceability and regulatory compliance in legal and environmental processes, designing and structuring information architectures that enabled the integration, organization, and analysis of administrative and regulatory data.
- Participated in the implementation and use of software developments and analytical tools, structuring databases and information flows related to administrative acts, notifications, and technical reports, facilitating tracking, control, and data-driven legal compliance modeling.
- Supported document digitalization and backlog reduction processes, transforming historical information into structured data, enabling visualization through dashboards, trend analysis, workload forecasting, and institutional decision-making from a data engineering and analytics perspective.
